 - 12 lines: 6 syrups + 4 flavours + soda + water
 - 14 lines: 8 syrups + 4 flavours + soda + water
- » Portion control or push-to-pour
- » Taprite flow control module integrated in the tower
- » Automatic ratio regulation based on product library
- » Video reproduction as screensaver
- » Anti foam & anti carry-over technology

Soft Drink Regulators

Taprite manufactures a variety of regulators for soft drink dispense systems and setups. Our high performance models are designed to provide maximum gas flow without freeze up. All Taprite regulators for soft drink dispense are designed to work in the 0 - 120 psi range.

Primary

Most of Taprite's primary regulators for soft drink dispense feature 1/4" flare (sae) fittings for quick installation on pre-mix and post-mix systems. Other industry common fittings are available for use in specialty setups and multi-beverage type dispense type systems.

Secondary

Taprite secondary pressure regulators, manufactured and tested according to UL Standard 252, which confirms the manufacturer's high standards of quality and reliability.

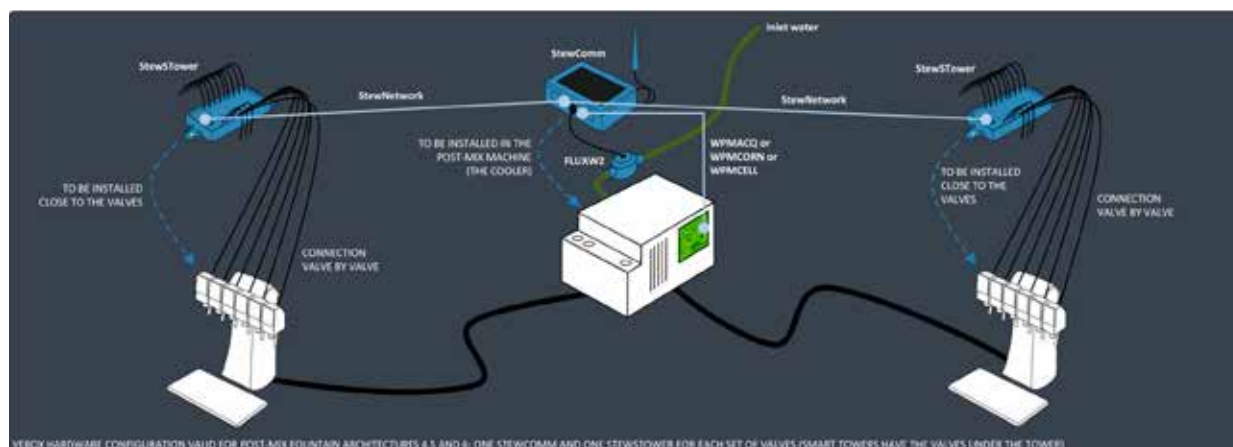

Remote Chillers

Discover our range of Ice Free eco-friendly post-mix chillers with green gas R290:

- » Energy-saving refrigeration system
- » Standard components to ease stock management
- » Designed to perform in heavy duty and tropical conditions
- » Compact solution: integrated carbonator and optional integrated syrup pumps
- » D-CONDITION approved

Optional telemetry kit with tailor-made central processing unit to monitor:

- » Product quality
- » Performance
- » Maintenance
- » Geolocalization

STB - Super Technical Block

Our towers are equipped with the STB Evolution technology, to improve: flexibility and cost effectiveness.

Super Technical Block (STB) Evolution is a flexible and cost-effective solution for beverage dispensers. It allows the rapid switch of carbonated/non carbonated water in each post-mix valve by simply turning a lever. This eliminates the need to remove or replace tubing, simplifying the installation and adding life value to existing units.

STB Evolution is compatible with global skeleton concept. A single standard technical part can be customized with several interchangeable covers. Thanks to this feature you can refresh the look of existing towers with significant cost savings (up to 70% less than the price of a new complete tower).
