

CATALOGUE 2026

Dear Customer,

Photo: Michael Bager/JFM

At Micro Matic, we are passionate about delivering the very best in dispensing. Our broad range of state-of-the-art solutions is designed to meet any need – from individual components to complete systems. In this overview, we have gathered the best of what Micro Matic does in what we hope is an easy-to-navigate guide.

Our offering is organized into five product clusters: dispense equipment, point of sale equipment, cooling technologies, dispense solutions, and expert services.

From individual components to complete solutions, we cover every dispensing need – and this catalogue is designed to make it easy to find exactly what you're looking for.

On behalf of the entire Micro Matic Group, I thank you for the interest you've shown in our solutions.

Warmest regards,

A handwritten signature in white ink, reading "Lars Gjødtsbøl". The signature is stylized and fluid.

Lars Gjødtsbøl, Group CEO, Micro Matic

62 Dispense solutions

74 Expert services

Note: This catalogue aims to serve as an overview and does not contain every product Micro Matic makes. Our full range and further details about products are available online.

Family values

The Nielsen families today

Founded in 1953, Micro Matic has been owned by a pair of families over three generations. Our 70-year history as a family business shapes the way we operate and work with customers every day. Your satisfaction makes all the difference, because our reputation depends on it. And when we talk reputation, we don't just mean business. We mean family.

Our approach to doing business

**Customers
first**

**Quality
in everything**

**Open
and honest**

Everything we do starts and ends with you, our customers. You enable and inspire us to do our best every day. At Micro Matic, doing our best means quality in everything. We don't make products that are "good enough." You choose us because we excel – and so we strive for excellence in every product we make, in every interaction with you.

Quality is difficult, and we depend on you to help us deliver it. This takes openness and honesty. Curious by nature, we want to know what you need from us and what you think about our work – even when you're less than fully satisfied. Let us be frank with each other. When we are, there's no limit to the success we achieve.

Our capabilities

Micro Matic distinguishes itself through a unique set of capabilities that underlie the solutions we produce and our work with customers.

Market insights

With sales to more than 150 countries worldwide, we understand your market, your needs and your challenges wherever you do business. Our in-house insights team collects knowledge about market trends and developments around the world, and we use these insights to develop solutions and advisory services that benefit you today and open new doors tomorrow.

Innovation

We have a team of 60 engineers working on R&D projects that result in breakthrough solutions for your business. Fully integrated dispense solutions, beverage towers in delightful new designs and materials, digital lenses for POS marketing, and advanced “internet of things” solutions. These are just some of the Micro Matic innovations that benefit our customers every day.

Our capabilities

Collaborative projects

Looking for an entirely bespoke solution? From brand-enhancing tower design to novel dispense concepts, our designers, engineers and project managers work with collaborative projects daily. For major chains and companies with access to many outlets, our EOT department develops innovative large-scale projects that can transform entire business areas.

Digital journeys

Digitizing your beverage dispense operations can boost sales, optimize performance, ensure beverage quality, and enhance customer satisfaction and your brand. Covering digital signage, sensor technologies, mix controllers, analytics and other tools, our DIGIPATH unit can help you along at any point on your digital journey. For us, digitization isn't about going all the way, but doing what's right for you.

Modern manufacturing

In line with our “quality in everything” principle, we invest heavily in our manufacturing setup. Starting with raw materials, our global scale gives us unmatched purchasing power, which keeps quality high and costs low. Our factories employ the latest manufacturing technologies, and of course we maintain exhaustive quality control systems throughout our operations.

Micro Matic and the environment

Environment-friendly practices and processes are no longer just a “nice to have” but a business imperative. Micro Matic works for sustainability on many fronts, and we thoroughly document our performance in freely available sustainability reports.

Stainless steel

For beer kegs and much other beverage-dispense equipment, stainless steel is a more sustainable option than plastic. As founder of the industry-wide Steel Keg Association, Micro Matic is deeply committed to steel over plastic. And with the promise of “green steel” on the horizon, stainless steel will become an even more compelling material choice.

Refurbishment

Buying new when you don't have to is bad news for sustainability, as the material consumption involved in manufacturing new products has significant environmental costs. That is why we've established an equipment refurbishing program. Refurbishing older components instead of discarding them adds up to a smaller carbon footprint*.

Product development

When we develop new products or optimize existing ones, we always evaluate the product's impact on the environment. This includes calculating expected CO₂ emissions that from raw-materials consumption and primary processing. These assessments can help us both meet customer demand and reduce our products' carbon footprint.

Reporting

For your reporting on supply-chain sustainability – and to help us track and improve our performance – we have been releasing sustainability reports annually since 2022. These reports follow Greenhouse Gas Protocol guidelines for environmental-performance reporting, include the relevant scopes 1, 2 and 3, and are available to download at micro-matic.com.

Dispense equipment

Micro Matic started producing keg spears 50 years ago and has since grown its range of dispense equipment to cover every aspect of “back-end” dispense equipment. Today we offer the full range of spears, regulators, tubing, couplers and valves, and hygienic cleaning equipment.

Dispense equipment needs to make sure you maintain an uninterrupted supply of beer and other kegged beverages. It also must protect your product from contamination – and thus the health of your customers. And it needs to ensure employee safety and be easy to operate.

All this is a tall order, and Micro Matic innovates constantly to deliver the safest, most hygienic and best-performing dispense equipment out there.

Keg spears

Fifty years of quality spears

Micro Matic or DSI, we have the perfect spear for your needs

Micro Matic entered the beverage dispense industry half a century ago by engineering high-quality keg spears for a major European brewery. That successful venture led to our getting into other dispense equipment – while we also kept innovating our spear technology.

Today we've sold more than 135 million keg spears worldwide. Our customers value the two distinct ranges we produce for their unmatched precision, safety features, and hygiene certainty.

Always more than meets the eye

Think keg spears are simple products? The truth is, they are deceptively complex, with the design and engineering of each individual part critical for ensuring safe, hygienic, and reliable operation.

Two great designs, endless possibilities

Via our Micro Matic and DSI spear designs, we offer valve systems for all common threaded and bayonet necks. All standard neck and coupler interfaces are available, plus the option of customized designs. And we offer different safety technologies based on valve/spear and neck type.

All Micro Matic and DSI spears meet EU and U.S. food-contact requirements and feature safety technology that protects your employees and customers. Our spears are easy to handle during assembly, disassembly and maintenance.

What's up with colour coding?

Invented by Micro Matic, the colour coding of keg spears is a maintenance approach that uses a new colour each year to enable camera-controlled or mechanical separation of kegs for scheduled maintenance.

By facilitating preventative maintenance, this ensures a greater return on investment and reduces the risk of unplanned maintenance and downtime.

Gas regulators

Primary or secondary, always premium

Micro Matic started making gas regulators in the 1990s. In 1999, we launched our Premium series, followed by the Premium Plus in 2015. These primary and secondary regulators cover CO₂, N₂ and mixed-gas applications and represent the widest range on the market – with the Premium Plus shown in independent testing to outperform any regulator in its price category on all parameters, including pressure accuracy and flow.

In 2024, we launched an updated version of Perfect Plus, which is even more powerful, safer, and more sustainable than the previous generation. In all, we produce about 300,000 gas regulators per year.

Perfect Plus 100

The highest-capacity member of the next generation of Perfect Plus gas regulators, the Perfect Plus 100 supplies 10 taps simultaneously. Delivering 100 L/min continuous flow performance and stable CO₂ pressure from full to empty bottle, the 100 features optimized technologies that make it the most precise regulator we've ever produced.

Perfect Plus and Premium Plus family

Perfect Plus 100

Ultimate performance, beverage versatility, and a wide range of options.

- Primary
- Supplies 10 taps
- CO₂, N₂, mixed gas
- 100l/min continuous flow

Perfect Plus 50

Versatile 5-tap option that covers many needs for CO₂ supply.

- Primary, secondary
- Supplies 5 taps
- CO₂ only
- 50l/min continuous flow

Perfect Plus 20

For simple setups, connects to both standard and SodaStream bottles.

- Primary
- Supplies 2 taps
- CO₂ only
- 20l/min continuous flow

Premium Plus

Reliable performance and optimal pressure control.

- Primary and secondary models
- CO₂, N₂, mixed gas
- Primary and secondary with maximum inlet pressure of 200 bar

Taprite

Micro Matic Taprite regulators boast the highest flow rate in the industry. Their robust design ensures high performance and reliability, and little risk of freeze-up problems. These regulators feature extremely durable and user-friendly polycarbonate bonnets for easy adjustment. Pull the cap to adjust pressure and push it back to lock it in.

Taprite Series 5740

High performance primary regulator, high flow for soda & beer.

- Gas: CO₂
- Mount: Tank or wall
- Gas flow: 250 l/min @100PSI
- Regulator compliance: UL 252
- Accessories compliance: UL 252A

Taprite Series 3740

Economy series primary regulator.

- Gas: CO₂
- Mount: Tank
- Flow rate: 125 l/m
- Regulator compliance: UL 252
- Accessories compliance: UL 252A

Taprite Series 1600

Primary & secondary regulator.

- Gas flow: 125 l/min @100PSI
- Regulator compliance: UL 252
- Accessories compliance: UL 252A

Taprite Series 5260

Secondary regulator.

- Gas flow: 125 l/min @100PSI
- Regulator compliance: UL 252
- Accessories compliance: UL 252A

QuickFit™

QuickFit™ is a game-changing system that enables you to change CO₂ without the use of tools.

QUICKER

It takes just a few seconds to change a CO₂ bottle with QuickFit™.

EASIER

No tools. No mistakes. No hazards. Just push until you hear the click!

SAFER

QuickFit™ eliminates safety issues related to changing CO₂ sources.

The industry's best gas regulators

- Powerful
- Safe
- Sustainable
- Easy
- Dependable
- Expandable

Tubing solutions

Protection from keg to glass

To ensure customer safety and satisfaction, your beverages and beverage ingredients need protection as they travel from keg to glass.

To ensure this, Micro Matic supplies liquid and gas tubing made from premium materials and manufactured to the most precise technical specifications. We offer the full range of Python insulated barrier and traditional tubing – and all the convenience of one-stop dispense equipment shopping.

Python tubing

Python tubing, which bundles different smaller tubes in an insulated shell, was invented by a Micro Matic company – Valpar Micro Matic. This multi-line insulated barrier tubing has become the solution of choice for many installations.

Taped Python

Our range of taped Python tubing is available in different line configurations, tube types and sizes and insulation thicknesses.

Benefits

- Designed to maximize thermal transfer between cooling and product lines, ensuring lowest possible dispense temperature
- Lines manufactured to close dimensional tolerances to suit both internal (barb and clip) and "push in" fittings
- Consistent product performance
- Fully customizable for individual requirements (1–24 product lines)
- Tubing can be cabled to allow greater overall flexibility, reducing the minimum bend radius

Foil Wrapped Python

Python tubing (any product line) with an aluminum foil lining added between the tubing bundle and the insulation. This improves temperature consistency and slightly reduces absorbed heat and dispense temperatures.

Benefits

- More uniform temperatures across product lines
- Reduced absorbed energy (heat gain) and dispense temperatures
- Foil can be added to any existing Valpar Micro Matic Python type
- Tubing can be cabled to allow greater overall flexibility, reducing the minimum bend radius

Easyfit Python

Easyfit Python features a specially designed outer covering of reinforcing yarn braid and a tough extruded polymeric coating. The low-friction surface greatly facilitates installation, especially in ducts and other hard-to-reach areas.

Benefits

- Tough outer coating for easier installation
- Designed to maximize thermal transfer between cooling and product lines, ensuring lowest possible dispense temperature
- Lines manufactured to close dimensional tolerances to suit both internal (barb and clip) and "push in" fittings
- Consistent product performance
- Tubing can be cabled to allow greater overall flexibility, reducing the minimum bend radius

Co-Axial Python

With this Python variant, the product line is housed in a larger cooling line, providing a full contact surface area between the coolant and product line for exceptionally cold dispense temperatures.

Benefits

- Maximum thermal transfer between coolant and product line, ensuring lowest possible dispense temperature
- No need for secondary cooling
- Exceptionally low dispense temperatures
- Lines manufactured to close dimensional tolerances, ensuring no product leakage
- A range of specially designed "push in" fittings is available
- Can be retrofitted to most existing dispense systems
- Tubing can be cabled to allow greater overall flexibility, reducing the minimum bend radius

Python tubing

Marine Python

RINA-approved Marine Python was developed to comply with fire-safety regulations on board vessels. Available in different line configurations and tube sizes, the product ensures excellent draft quality.

Benefits

- Classified as a fire retardant with low smoke and low fume characteristics
- Designed to maximize thermal transfer between cooling and product lines, ensuring lowest possible dispense temperature
- Lines manufactured to close dimensional tolerances to suit both internal (barb and clip) and "push in" fittings
- Consistent product performance and fully customizable
- Tubing can be cabled to allow greater overall flexibility, reducing the minimum bend radius

Back Python

Back Python is any python that attaches to the source of the product (keg) and typically connects the keg to the cooler, normally a 1+2 configuration. These variants normally contain preformed tubing, keg connectors, and sometimes other components.

Benefits

- Provides further cooling of product line from the keg to the cooler and main tubing
- Maintains temperature of product even during periods of low activity and prevents microbial growth by maintaining a lower temperature
- Tubing can be cabled to allow greater overall flexibility, reducing the minimum bend radius

Coloured Python

Our Taped, Easyfit, or Cabled Python is available with the outer protective layer coloured for ease of identification and customer brand recognition. Does not apply to Marine Python.

Benefits

- Easy identification and brand recognition
- Designed to maximize thermal transfer between cooling and product lines, ensuring lowest possible dispense temperature
- Lines manufactured to close dimensional tolerances to suit both internal (barb and clip) and "push in" fittings
- Consistent product performance and fully customizable
- Tubing can be cabled to allow greater overall flexibility, reducing the minimum bend radius

Trace Cooler

A Trace Cooler is a section of Python tubing that maintains product cooling between the main python and the point of dispense. It normally contains two cooling lines and one or more product lines. Lines may be performed to allow the Trace Cooler to fit into a tower or bar-counter box. May also contain fittings to cool the tap and produce condensation.

Benefits

- Provides additional product cooling between the python and the tap or point of dispense
- Maintains temperature of product even during periods of low activity and prevents microbial growth by maintaining a lower temperature
- Tubing can be cabled to allow greater overall flexibility, reducing the minimum bend radius

Traditional tubing

In addition to our Python solutions, we offer a wide range of traditional tubing in different materials and for all imaginable dispense-related purposes.

Shut-off valves

Smart, Hygienic, and Leak-Tight by Design

Engineered for precision, hygiene, and 100% leak-tight performance, our shut-off valves are designed to meet the highest industry standards. Manufactured entirely in stainless steel and built on proven ball valve technology, these valves feature a gap-free, hygienic design that ensures optimal cleanliness and reliability.

Whether you're looking for simple, space-saving solutions or more advanced 3-way configurations, our shut-off valves cover a wide range of needs. From rotatable and angled designs to flexible mounting and connection options, we offer a selection tailored to your operational setup. The valves displayed here represent only a small portion of our complete range.

Cleaning tools

Make your operation a clean machine

Line cleaning is a critical part of operations, whatever beverage you serve. A tainted line can degrade the quality of your product, harm your reputation and, in the worst case, put your customers' health and safety at risk. At the same time, the work of cleaning beverage lines must be safe for cleaning staff.

Micro Matic offers the full range of sturdy, effective and safe line-cleaning equipment. When it comes to beverage-line hygiene, only the best is good enough.

Cleaning sockets

Our stainless-steel cleaning sockets are rugged and chemical-resistant. A gas-stop safety feature ensures that, even if CO₂ is not shut off at the gas line, no gas will enter the cleaning system, no cleaning solution can enter the gas line, and no leaks into the environment can occur.

Standard coupler interfaces are available, along with thread, push-fit, nozzle, press, SOV and plug connections.

Cleaning bottles

Plastic or stainless steel and with up to four necks, Micro Matic cleaning bottles are the perfect solution to all your needs for line cleaning.

Point of sale solutions

A beverage dispenser isn't just a functional tool. Along with your branding, décor and bar staff, it's the "face" of the products you sell. Customers see those proud towers, sleek taps and inviting fountains and they're already tasting the delicious drinks you serve.

The challenge is that every bar has its own style, look and vibe, so finding POS solutions that really fit isn't always easy – unless you partner with Micro Matic.

Our large design and engineering team, advanced technologies like built-in telemetry and digital lenses, and decades of experience with countless projects enable us to offer a world of pre-designed beer towers, plus customized and bespoke design options.

We also offer a wide range of postmix towers and bar guns, water fountains, and wine, spirits and hot-beverage dispensers – plus our exclusive taps, handles, medallions and digital signage.

Bridges and L, Y or T shaped towers with multiple taps are growing in popularity, as venues seek to give customers greater choice while economizing space.

We offer a wide selection of pre-designed bridges and industrial-style L, Y and T towers to meet these needs. Our multi-tap towers can also be customized to your specifications.

Modular family

One core. Endless possibilities.

A tower that matches your brand

Your brand deserves more than a one-size-fits-all solution. Each tower in the Modular family supports flexible design through claddings crafted specifically for that model. Each tower offers a wide variety of material and finish options—allowing you to define a unique identity for each while preserving a coherent brand language across your range by keeping the same core.

Go sleek with metal, modern with plastic, sophisticated with wood, sustainable with recycled materials, or bold with LED digital screens. Claddings can be pre-designed or customized, whatever your style, Modular towers ensure your branding remains dynamic, engaging, fresh and while still being visually belonging to your brand family.

Cladding systems

Micro Matic cladding systems let you purchase a core tower and then add the cladding of your choice.

Cores come in different shapes, and claddings can be chrome, gold, copper, painted or hydro-coated – imagine the look you want and then choose from our many options.

Available materials include recycled materials, plastic, wood, metal, and even an LED screen. Claddings can be refurbished, customized and of course changed as often as you like. This provides unlimited flexibility and a very long service life for your core towers.

Bespoke towers

Collaborative design from the ground up

Bespoke towers from Micro Matic are stunning objects that epitomize a brewery's or venue's brand. Each one of our bespoke towers is the result of a deeply collaborative process between you and our team of highly experienced engineers and designers.

The tower that results from this process not only reflects your company's brand values and aspirations – it can help transform your brand by bringing it to life in dramatic fashion, right at the point of sale.

Collaborative design

Every bespoke tower design project follows a proven process, with an experienced project manager serving as a liaison between you and our design team.

1. BRAINSTORMING

We establish the project's goals, expectations and wishes.

2. IDEA

We develop initial ideas for how to achieve the project goals.

3. FEASIBILITY STUDY

We conduct a feasibility study based on estimated volumes and costs.

4. DESIGN

We prepare 3D models and conduct any required CAD studies.

5. M&T - PROTOTYPE

We produce the moulds and toolings, and produce the first samples.

6. ROLL-OUT

We make final adjustments to the samples and roll out your final product.

The difference lies in the details

For Micro Matic, taps, handles and medallions are more than just accessories. They are the cross on the 't', the dot over the 'i'. They make or break your tower as an experience for customers and your own staff.

That is why we make sure these products ooze quality and exclusivity. And why we invest so heavily in their development.

Digital signage Bring your messaging to life

A Micro Matic innovation, digital medallions, and rectangular screens add a whole new dimension to your POS branding and communication.

Convenient upload and transfer options make it easy for you to add your digital content and change it as often as you like. These solutions give your bar a new sense of vitality and excitement, while communicating important information.

We offer fleet-management services for digital signage, where an intuitive dashboard lets you schedule and synchronize digital content across your outlets.

Cooling technology

Temperature control and carbonation are two of the most critical parameters in serving beverages of all kinds. Maintaining the perfect levels ensures a superior experience for customers and contributes to beverage line hygiene and food safety. But challenges abound – from meeting diverse needs for many different beverages, to minimizing electricity costs and your venue's carbon footprint.

Micro Matic answers your cooling needs by providing the most comprehensive portfolio available and developing customized solutions to meet exact requirements. Efficient, easily serviceable and enhanced with sophisticated IoT capabilities, our cooling solutions are second to none.

Premix coolers

Customized to meet any need

Postmix coolers

Efficient, reliable, intelligent

Premix coolers

Customized to meet any need

The key to successful premix cooling is having just the right tools for your needs, and then integrating them into a failsafe, user-friendly whole.

Micro Matic's extensive premix cooler range and flexible customization and branding options add up to complete solutions tailored to your exact needs. Our cooling systems are known for their dependability and for being easy to use and maintain.

Ice bank under-counter coolers

High-performance, efficient, and flexible solutions built from quality components and that work under any ambient conditions. Can be customized to suit your needs.

Dispense solutions

Many challenges in beverage dispensing are best solved not by a single piece of equipment, but by complete solutions based on a Big Picture approach.

At Micro Matic, our Everything on Tap (EOT) department works every day to meet complex needs and realize wide-ranging visions. Bring us your dream, crazy idea, or barrier, and our EOT team will work with you to imagine, engineer and implement a bespoke solution that can transform your beverage dispense business.

In addition to EOT projects, we offer several complete solutions for beverage dispensing, including our FlexiDraft™ and Q-Draft systems. Designed to ensure better hygiene, ease of installation and use, and superior draft quality, these systems help you meet demands from health authorities, your own employees and, above all, your customers.

Everything on Tap

Holistic, bespoke, transformative

FlexiDraft™

Perfect hygiene made easy

Q-Draft

Improving draft safety

Everything on Tap

Holistic, bespoke, transformative

Supermarket chain thinking of installing chain-wide juice dispensers? Stadium looking for ways to serve a greater variety of drinks faster? Fast food startup that wants to get beverage dispensing right from the start?

Some beverage-dispense projects need to start a level higher than pre-designed systems. This is what our dedicated EOT department is all about. Our experts will listen to your most complex challenges, your most far-out ideas, and your most ambitious overall goals, and then work with you to design your own unique solution. From a bird's-eye perspective, with no limit on capabilities, systems or equipment.

Our approach is holistic, our solution bespoke, and the results nothing short of transformative. Each project is designed, engineered and rolled out by a team of experienced, senior Micro Matic specialists, working closely with you every step of the way.

EOT concepts

Case

Micro Matic's EOT team gets the cocktails flowing faster for Easy Drinks

Easy Drinks, a Brazilian producer of non-alcoholic and fruit-based beverages, wanted to up its game in cocktail dispensing at events and POS setups. Specifically, the company wished to go from dispensing two cocktails at a time to four – all with different ratios and densities, both carbonated and not. For assistance, they turned to Micro Matic.

To help Easy Drinks achieve their goals, Micro Matic's EOT team worked closely with the company to design a customized dispense system that would meet their exact needs. Combining multiple Micro Matic technologies – not least an intelligently controlled two-spout tap – the system was designed to perform Easy

Drinks' complex mixing process quickly, precisely and with less impact on the environment.

After testing the new solution, Easy Drinks rolled it out at events large and small – including major music festivals – across Brazil. Able to dispense twice as many drinks as the company's previous equipment, the solution helped staff serve many more drinks per minute, shortening lines at the various bars while keeping the ratio of ingredients perfect throughout the day and night.

Of course, customers also benefitted from the consistently high quality of the drinks served, and everyone wins with a more climate-friendly solution.

"We could not be happier with the solution Micro Matic developed for us. Ultimately, it meant more business, better quality, a smaller carbon footprint, and happier customers."

— Fabricio Lot, Co-Owner, Easy Drinks

FlexiDraft™

Perfect hygiene made easy

FlexiDraft™ is a revolutionary draft beer system with a one-way beer line that extends the fresh life of beer in a broached keg from 6 to 30 days. It also eliminates the need for cleaning and maintenance. The principle is simple: You replace your line every time you change a keg.

Local health authorities will love the hygiene that FlexiDraft™ guarantees. Your employees will appreciate the quick and easy keg+line changes. Everyone – especially your customers – will enjoy the far longer shelf life and superior draft quality a FlexiDraft™ system delivers.

0 alcohol? 0 problems!

In the past, serving alcohol-free beer on draft was almost impossible. The absence of alcohol meant there was nothing to prevent bacteria from growing and contaminating the beer line.

FlexiDraft™ changes all that. Thanks to the single-use beer line, even alcohol-free beer stays fresh and pure, right to the bottom of the keg.

Recyclable plastic

Think a disposable beer line means plastic waste? Think again. FlexiDraft™ beer lines are fully recyclable, with convenient recycling programs available in most markets. This helps you meet increasingly stringent rules and demands for plastics disposal, while enjoying all the benefits of the single-use concept.

Refer to your local Micro Matic representative for details on recycling in your market.

The FlexiDraft™ family

CORE

FlexiDraft™ CORE is the perfect solution if you already have a fridge but still want to enjoy the advantages of the FlexiDraft™ system.

UNDERCOUNTER

FlexiDraft™ UNDERCOUNTER is a series of high-quality under-counter fridges that combine with FlexiDraft™ towers to make an integrated system with up to four taps per unit.

AirBar

Not only is AirBar highly mobile, it also has everything you need to serve cold beer right away. Self-contained and easy to push, just wheel it where it's needed and start serving!

STAR

FlexiDraft™ STAR is an integrated system that combines all the benefits of FlexiDraft™ towers with mobile cooling options in different sizes, allowing up to four taps per unit.

COUNTERTOP

A solution that fits perfectly in locations that don't have a lot of turnover or space, but still want to offer their customers great-tasting draft beer.

WALL TAP

By integrating taps into the wall behind your bar, FlexiDraft™ WALL TAP is the perfect solution for maximizing the number of beers you offer.

Taps on the wall is for illustration purposes only

Towers and branding

FlexiDraft™ towers come in a wide variety of designs, with personalized branding available. Branding can also be added to refrigeration units.

Q-Draft

Improving draft safety

The Q-Draft system improves draft safety by reducing the risk of contamination via all three common sources: Ambient conditions, insufficient isolation, and bad tubing connections. This adds an extra layer of protection for your customers, while making sure you pass health and safety inspections with flying colours.

Q-Draft is designed to ensure very easy dispense-system installation at the designated location. It comes pre-assembled all in one box with a simple installation guide that allows fast end secure installation even for first-time installers.

Q-Draft insulated tubing keeps your beer cool all the way from keg to glass. The system is easy to install and use, requires less cleaning and maintenance, and is priced competitively. Q-Draft works everywhere (performs at 43°C) in traditional under-counter setups.

MixPro

Combine. Configure. Captivate.

A complete, multi-beverage dispensing solution.

Want to serve beer and wine from the same unit? Add cocktails, sodas, or sparkling water? With Mix-Pro, anything is possible. This fully modular, configurable solution blends innovation, performance, and style into one scalable package – ready for pre-mix, post-mix, or a combination of both.

Mix-Pro's unique product-blending technology achieves exceptional carbonation, hygienic dispensing, and a consistently high-quality pour. Whether you're introducing new flavours or streamlining your existing beverage lineup, Mix-Pro delivers a best-in-class experience for you and your customers.

Multi-talented for many applications

FLEXIBLE BY DESIGN

From high-energy bars to refined dining venues, Mix-Pro integrates into a wide range of tower designs, placing it in a prominent bar position for maximum visibility. Configuration options make it easy to serve a wide variety of beverages without compromise.

QUALITY IN EVERY POUR

The precision blending system maintains consistency from the first glass to the last, even with complex recipes. Remarkable carbonation brings drinks to life, while the separate spout safeguards taste integrity.

BUILT FOR THE FUTURE

Mix-Pro combines timeless aesthetics with cutting-edge functionality, giving operators the flexibility to adapt menus and meet evolving customer tastes – without sacrificing performance or design.

Benefits at a glance

Enhanced performance compared to traditional dispensing valves

Everything on tap – adaptable to carbonated soft drinks, cocktails, mixology, beer, wine, and more

High carbonation for a fresh, vibrant mouthfeel

Hygienic design with separate spouts for optimal cleanliness

Complete, scalable package – tap, tower, and control box in one system

Expert Services

As beverage dispense solutions become more integrated and sophisticated, there is a greater need for qualified services. In line with our “one-stop-shop” strategy, we are building a portfolio of Micro Matic services geared to meet your current and future needs – no matter how large or small your operation.

All Micro Matic services are carried out by either in-house staff or selected partners who have been thoroughly trained in our procedures and local needs, practices and regulations. Whether you turn to us for training, refurbishing, installation or warehousing, you can count on our service staff to meet the high quality standards you expect from Micro Matic.

Training and certification

Anyone can become an expert at safe spear handling, carbonation settings, beer line installation and many other topics, thanks to our experienced training staff and certification program. We'll audit your after-sales services, assess your processes, train your staff, and support you in building a team of highly respected service professionals*.

Equipment refurbishing

Save money and reduce your carbon footprint by refurbishing components and using refurbished equipment as spare parts. In some markets, replacement kits and training materials are available for on-site refurbishment*.

Installation services

Need help with equipment installation? Rely on our local market service centers and network of certified installation experts. You'll save time and money by procuring key services along with your products – all from a single supplier*.

Warehousing and logistics

If your business is beer, why should you have to spend time and energy on the intricacies of warehousing and logistics? Instead, let us take on the burden, while guaranteeing that your equipment will arrive on time from nearby storage facilities*.

FOUNDING MEMBER OF
STEEL KEG ASSOCIATION

Let's raise a glass to draft!

CIRCULAR:

Re-usability and 30+ year lifespan enable steel kegs to help reduce greenhouse gas emissions and other environmental impacts.

EFFICIENT:

Steel kegs deliver bulk liquids, driving superior economic benefits for breweries, bars and restaurants.

FRESH:

Consumers appreciate the uniquely "fresh" draft experience. From the first pour to the last sip, there is nothing else like it in the beverage industry.

WE'RE ON A MISSION!

The Steel Keg Association is a non-profit marketing organization focused on increasing the volume of beer and other beverages served from stainless steel kegs.

Micro Matic is a founding member of Steel Keg Association.

DEDICATED TO DRAFT QUALITY

Headquartered in Denmark and with 24 offices in 16 countries, Micro Matic Group is the world's leading producer of beverage dispensing equipment.

We were founded in 1953 to solve difficult engineering problems for customers in many industries. In the 1970s, we began to focus on packaging and dispensing solutions for draft beer. While beer remains dear to our hearts, we now provide solutions for dispensing almost any beverage to thirsty patrons worldwide.

Quality, efficiency, and collaboration are the pillars our business is built on. You and your customers motivate our 1600 employees to go above and beyond every day. Find out more at micro-matic.com.
